Dredges smaller than 20 inches discharge will not be considered under this Solicitation. Information furnished in the Equipment Schedule will be used to compare the equipment offered by the bidders. For channel maintenance dredging, the speed at which the channel can be swept is a critical factor in determining rate of advance and output. To insure that the dredge furnished by the successful bidder can perform the sweeping function adequately, the hauling engine shall be able to swing the dredge at a minimum speed of 70 feet per minute.

d. The dredge shall be capable of swinging 150 feet from the center line of the cut without exceeding a 55 degree angle with the head at a depth of 25 feet below the water surface.

e. Any bid not meeting the requirements of paragraphs c. and d. above will be considered non-responsive. Each bidder shall furnish upon request a statement of whether he/she is now or ever has been engaged in any work similar to that covered by the specifications herein, the year in which such work was performed and the manner of its execution, and other information as will tend to show the bidder's ability to prosecute the required work. The apparent low bidder will be required to furnish the Contracting Officer a manufacturer's production curve for his/her pump prior to award of contract. This curve will be used to verify that the dredge is capable of maintaining the production rate used for bid purposes.
